

STILL LEARNING PERMANENT MARKER ISN'T FOR WALLS, BUT MAKING PERMANENT LIFE DECISIONS?

"If a student is considered a mature minor they can make decisions for themselves without parental consent and should be affirmed in their gender identity at school without a family representative/carer participating in formulating the school management plan."

www2.education.vic.gov.au/pal/lgbtiq-student-support/policy

NSW let's not go the way of Victoria.

Gender identity affirmation leads to 'gender affirming care', the first step on that medical pathway is PUBERTY BLOCKERS...

indefenceofchildren.org/take-action

Don't let Labor & Greenwich mislead you: 'Gender Affirming Care' Is Conversion in Disguise

Non-conforming kids said to be 'born in the wrong body' are put on Puberty blockers, advertised on transhub.org.au as Triptorelin, Goserelin, or Leuprorelin (brand names Lupron, Eligard, Zoladex, Triptodur). This is ironically part of 'gender affirming care'. Labor & Greenwich want to mandate this in law. **Say NO.**

As of June 2022, the FDA has received over 60,400 reports of adverse reactions to common GnRH agonists, including over 7,900 deaths.¹⁸ For reference, **studies suggest that 82-98% of adverse drug reactions go unreported.**¹⁹

Table 1. Adverse drug reaction (ADR) reports for common GnRH agonists.

Brand Name	Total ADR	Deaths
Eligard	18,860	3,966
Lupron	9,117	252
Lupron Depot	20,067	2,244
Lupron Depot-Ped	1,308	10
Supprelin LA	684	26
Synarel	2,009	6
Trelstar	780	48
Triptodur	1,095	26
Zoladex	6,484	1,344
Total	60,404	7,922

Advertised on ACON's transhub.org.au. in use in Australia.

SHORT TERM HARMS OF PUBERTY BLOCKERS ON CHILDREN

- Headaches, hot flushes, weight gain, tiredness, low mood and anxiety, **reduction in bone density**, bone fractures, blurred vision, vision loss.
- The Karolinska Institute (Sweden) has also reported **liver damage**, unexplained weight gains, mental health problems, spinal fractures, osteopenia, and failure to grow.
- Increase in behavioural and emotional problems in girls, including an increase in wanting to **"deliberately try to hurt or kill self."**

LONG TERM HARMS OF PUBERTY BLOCKERS ON CHILDREN

- **Loss of fertility/sterilisation** as ova & sperm won't mature.
- **Loss of sexual function and capacity to orgasm:** young people given blockers at tanner from 10-11 yrs old who go onto cross-sex hormones will have **reduced capability to orgasm**, which may impact their ability to enjoy intimate relationships.
- Level of puberty resumption after blocker use is stopped: unknown.
- **Effects on brain development: unknown.** Concerns raised about negative impact on IQ, long-term spatial awareness, reaction time and missing out on a window for critical cognitive development.
- Impact on the growth of all major organs; heart, lungs, genital tissue etc.
- **June 2022 the FDA received 60,400 reports of adverse reactions to common GnRH agonists, (puberty blockers), including over 7,900 deaths.***
