

**No child is born in the wrong body.
Say 'No', to Gender affirming care.**

SCAN ME

Part of the 'gender affirmation' process is called "Social Transitioning". 'Scan Me' for the full risks and harms of the practice to children.

We support the rights of parents to:

- *Direct the education, upbringing, and medical care of their children.*
- *Teach their children regarding ultimate issues of sexuality and identity.*
- *Provide truly informed consent for their children's medical care.*
- *Protect their children from harmful, unnecessary, unsettled, untested, unproven, or experimental treatments.*
- *Seek out and provide effective care that will explore, and provide lasting relief to, the underlying causes of their child's mental distress with their sex.*

Parents of vulnerable children beware. Is your school confusing your child?

'Are you a boy?', they say..
'Are you a girl?'

...how do you know?

They say this is all about 'care',
but what kind of 'care'?

'Gender affirming care' persuades kids to 'be their 'authentic' self'. But, how authentic is it to change names, pronouns, clothing and alter their body to the appearance of the opposite sex? All, so susceptible non-conforming kids, autistic kids, vulnerable and abused kids can be 'cured' by a **one size fits all solution of being 'trans'.**

\$\$\$ A solution where big Pharma profits. \$\$\$

WHAT IS GENDER AFFIRMING CARE?

1 **Gender dysphoria** is a condition in which a youth feels confused or uncomfortable with their biological sex, causing them extreme psychological distress.

“Gender Affirming Care” is falsely promoted as a lifesaving treatment. It first prescribes **social transitioning**, a change of pronouns, name, opposite sex clothing and treated as the opposite sex.

Socially transitioning a student almost always leads to **medical transitioning**.

2 **GENDER DRUGS ARE HARMFUL**
Medical transitioning is the taking of puberty blockers by children and teens who are distressed about their bodies or have sex-atypical interests, and 98% of adolescents on puberty blockers will be then prescribed cross-sex hormones.

Puberty blockers and cross-sex hormones can compromise bone health, prevent maturation of the brain, cause infertility, deteriorate genitalia and major organs, remove capacity for orgasm and triple the risk of heart disease.

3 GENDER AFFIRMATION HARMS CHILDREN AND TEENS.

Comprehensive studies show “gender affirming care” **is not safe** and effective despite being seen as a cure to gender dysphoria by advocates of “gender identity” and the pharmaceutical industry.

4 TRANSING THE GAY AWAY

There is a high correlation between gender non-conformity and dysphoria in childhood and people who grow up to be gay, lesbian or bisexual; over 81 to 92%.

Given studies have shown 61-98% of trans-identifying adolescents outgrow their gender dysphoria, gender affirming care concretises a phase that most youth would grow out of.

5 'AUTHENTIC IDENTITY' FOR CHILDREN IS A MYTH.

Children and youth can go through a series of 'identities' as they mature. As adults we do not treat every declaration our children make as though it's permanent. It's an Authentic Identity until it's not.

The fact is they're CHILDREN.

UNDERLYING ISSUES

Studies have shown that 43-75% of adolescents with gender dysphoria have at least one type of psychiatric comorbidity.

6 “Gender Affirming Care” ignores many of these contributing factors, such as:

Anxiety Disorders

Eating Disorders

Autism Spectrum

Childhood Trauma

A 'TRANS' CHILD OR A DEAD CHILD?

Proponents of childhood transition often ask, “**Would you rather have a trans child, or a dead child?**”

7 **Its emotional blackmail.** No data has shown children will commit suicide if they do not socially or medically transition. No parent will end up with a son from a daughter through body modification. Nor will they retain a fully functional daughter. What transition creates is a chemically altered child mimicking old-fashioned ideas of masculinity & femininity.

8 TRUTH IS REAL KINDNESS

If your child is suffering gender dysphoria, be truthful and compassionate. Honesty is the kindest form of communication. Allow them to explore their interests without sex-based expectations. Provide them adequate psychological care for all mental health concerns. Keep them off drugs.
